Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 November 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

1. The disclosure is objected to because in Claim 3, lines 2-4, "worm" should be "worm".
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Shimizu et al 6390230.

Shimizu discloses an electric power steering apparatus 10 (figs 10 and 11) comprising Driving gear/worm 112, and driven gears/worm wheel 113,

In which backlash between the two is set at least in a neighborhood region of a steering neutral position as smaller than in a remaining region (col 11, lines 16-32), and,

Wherein a shaft center of the worm is offset from the worm wheel (fig 11, and col 16, last two paragraphs, to col 17, line 10).

Art Unit: 3611

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shimizu in view of Cheng et al 6354395.

Shimizu does not disclose the driven gear/worm wheel as including a portion formed by biasing a part of an outer periphery of teeth in a direction to decrease backlash, while Cheng shows worm wheel 64 with these attributes in figs 4 and 5, and col 4, second to fourth complete paragraphs. It would have been obvious to one with ordinary skill in the art at the time the invention was made to include this feature, as shown in Cheng, to further decrease backlash/noise in the system, thus increasing performance and component life.

4. The prior art made of record, and not relied upon, is considered pertinent to the disclosure: Watanabe et al 6561306, Murakami et al 6550567, Kurokawa et al 6516915, 6425455, Takaoka 5819871, Nakajima et al 5738183, Chikuma et al 5445238.
